

Slide 12

Getting to know Safari. Safari is a web browser that comes built in to the iPad. You'll use it to access websites on your device. Safari's interface is similar to those you might find a desktop web browser, and it also has a few unique features to make mobile browsing easier. Go ahead and click Safari on the Home screen.

Slide 13

In the address bar enter www.wikipedia.com, then press Go,

Press English once the page loads. I will go over some of the features you can use with Safari.

- Use back and forward buttons to navigate between pages you've recently visited.
- Use the Share button to create a bookmark, save the page to your reading list, and more. You can even email the link to your friends, or share it on Twitter or Facebook.
- The Reader feature allows you to view web articles in a large, easy-to-read format, free of any ads or clutter.
- Tap here to see your bookmarks, shared websites, and reading list. If you don't have an internet connection, you can still read websites that you've added to your reading list.
- If you have other Apple devices, tap the iCloud button to access any sites you've left open in Safari on another apple device.
- Tap here to create a new tab. When you create a new tab, the favorites page will appear, which includes shortcuts to your most frequently visited websites. You can tap a website to navigate to that page, or enter a URL into the address bar as normal.
