

Slide 7

Cleaning your iPad: When cleaning your iPad make sure you have a soft, lint-free cloth for wiping fingerprints and smudges off the screen. Never use household cleaners, window cleaners, aerosol sprays, solvents, alcohol, ammonia, or abrasives to clean. The iPad has an oleophobic coating; simply wipe the screen to remove oil left by your hands. The ability of this coating to repel oil will diminish over time with normal usage, and rubbing the screen with an abrasive material will further diminish its effect and may scratch your screen.

Slide 8

Connecting to Wireless. Tap the Settings icon on the Home Screen

Slide 9

The settings will appear. Tap Wi-Fi in the left pane. Next to Wi-Fi, tap the control to turn it on or off.

Slide 10

To join a network that's in range (for example, your home's Wi-Fi or nearby public hotspot), look for it under Choose a Network. Then tap the network you want to use. If the network is secure, you'll need to enter a password in order to connect to it. Here, we will want to connect to Solution_Center Network.

Slide 11

After you tap on the Network you want to connect to, if it is a secured connection a password screen will come up. Here you will enter the password for the Network. The password the Network we selected is Wiatel49. Shown up on the screen. These passwords are case sensitive so make sure you capitalize anything that is in caps. After you are done putting the password in select Join. Once you connect to your home, hotel, library network, you shouldn't have to do it again unless you reset your network (router) or your iPad settings. If the network isn't secure, you can connect to it without a password, but think carefully before you do (neighbors connection, etc)
